Overview

- PeopliHealth app connects the Government and people on the Healthcare segment.
- Objective:
 - This app facilitates the PHM (Population Health Management) to Govt. policy makers, Govt. administrators to monitor the Population Health. They can pro-actively control any abnormalities based on the predictive analytics capabilities.
 - This app can also be used by the people to track their health as well as provide health information back to the Government.
 - Hence, PeopliHealth covers the end-to-end healthcare solution with the help of data analytics capabilities that helps both the Govt. as well as the people, which is the current gap that prevails in our country.

Features

- Population Health Management
 - ✓ Predicting the epidemic outbreak through Predictive Analytics modeling
 - ✓ Data visualization on the current severity of the epidemic through a descriptive analytics burn chart
 - ✓ Performance indicator trend analysis of various State / District Health parameters.
- Better effective Healthcare
 - Effectiveness of healthcare is based on both the healthcare provider and consumers – the patients.
 - People uses this app for the following
 - ✓ Immunization calendar
 - Maternity & Infants
 - ✓ Communicable disease update
 - ✓ Nearby Public Health centers
 - ✓ Emergency alert

PeopliHealth

✓ - Available in this prototype

Users

Govt. agencies –
Policy makers, Health
administrators

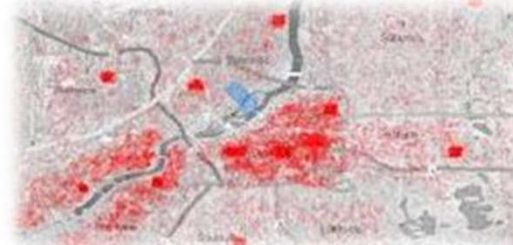

We the people

Workflow

Govt. agencies –
Policy makers, Health
administrators

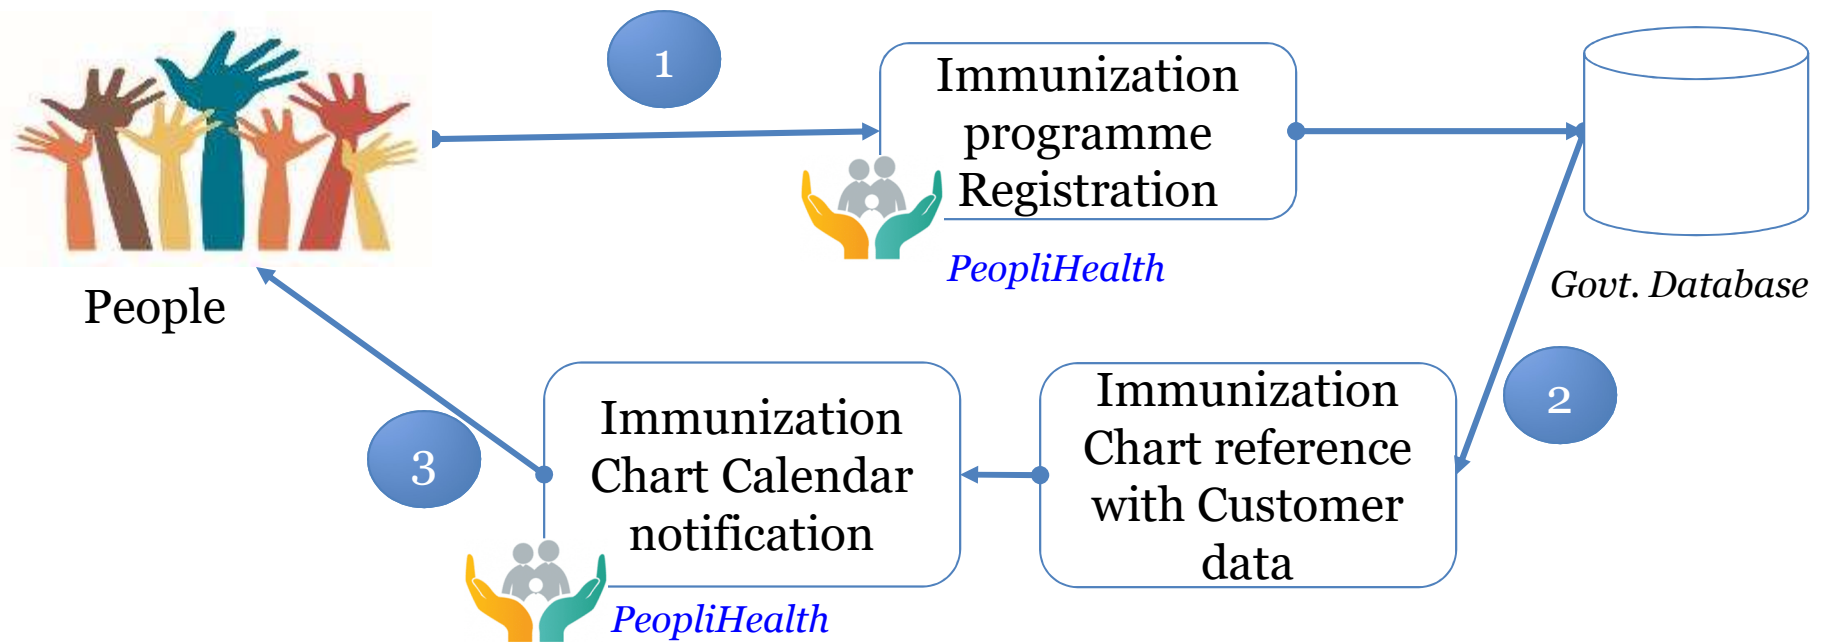

Proactive prediction
of epidemic outbreak
and take appropriate
measurement to
control

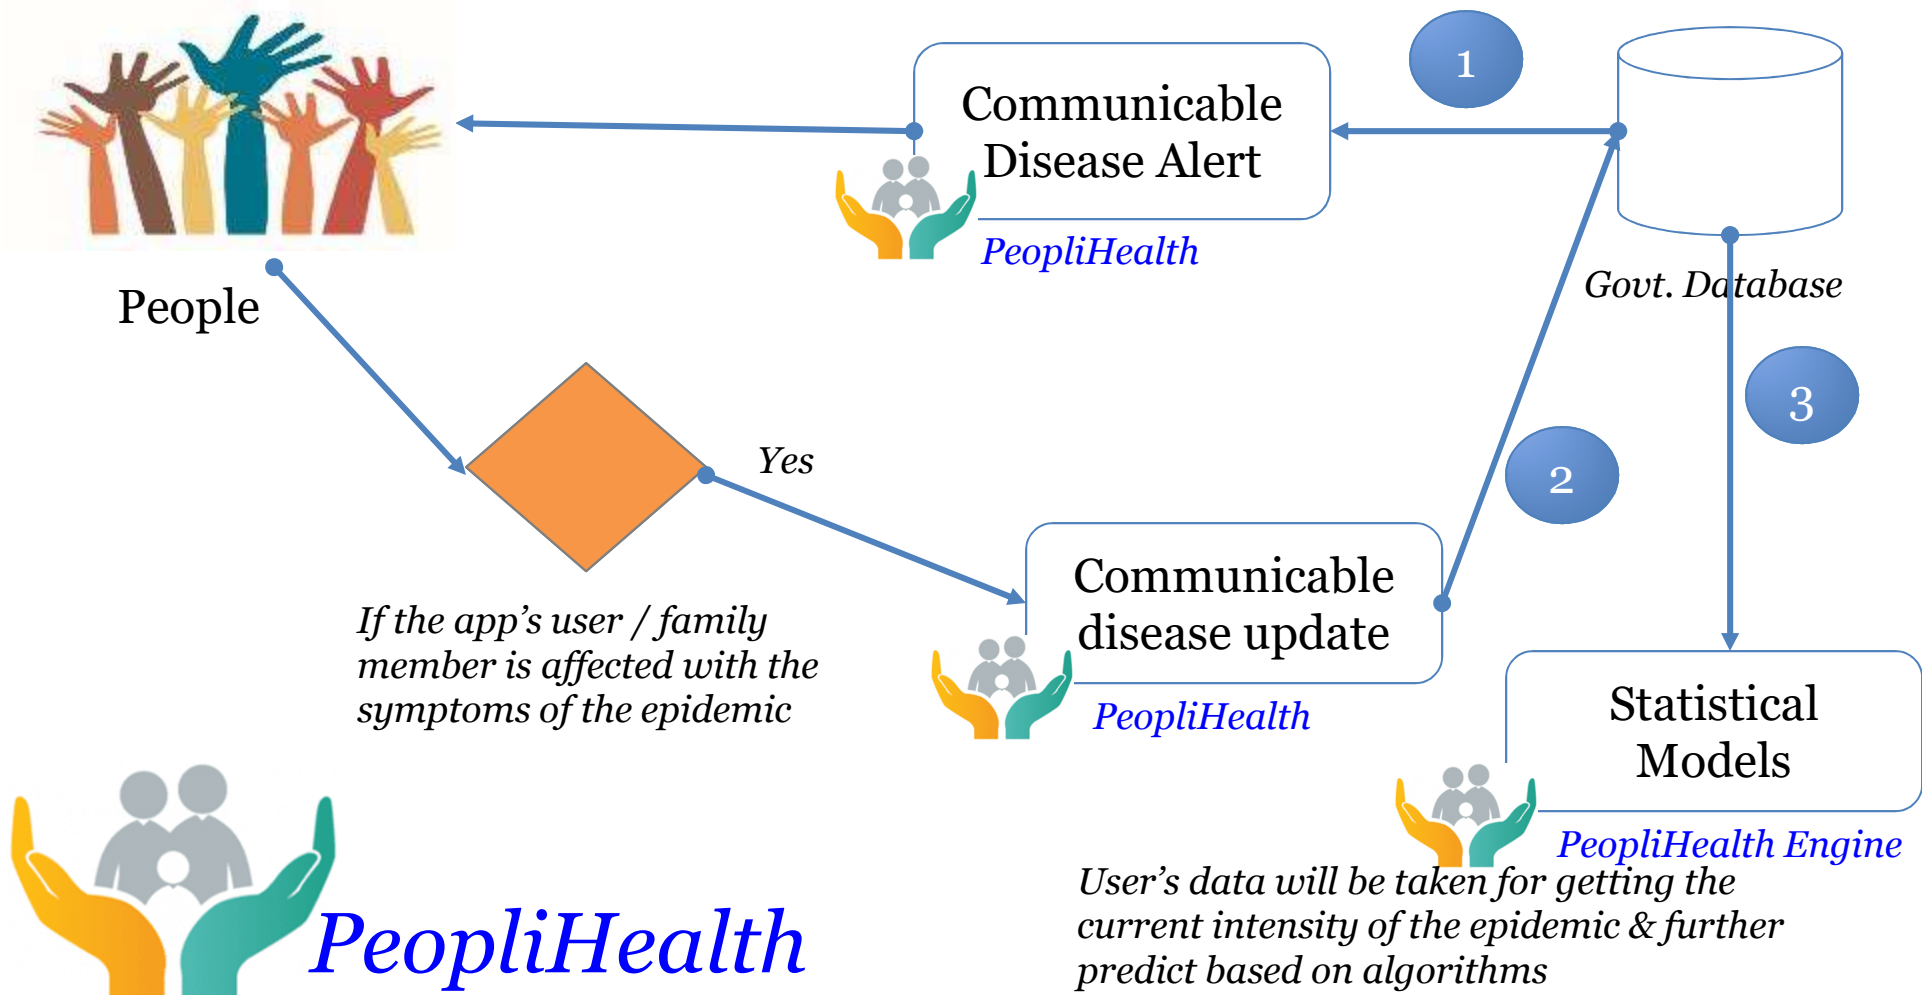

Evaluates various
health indicators as
part of Population
Health Management
practice.

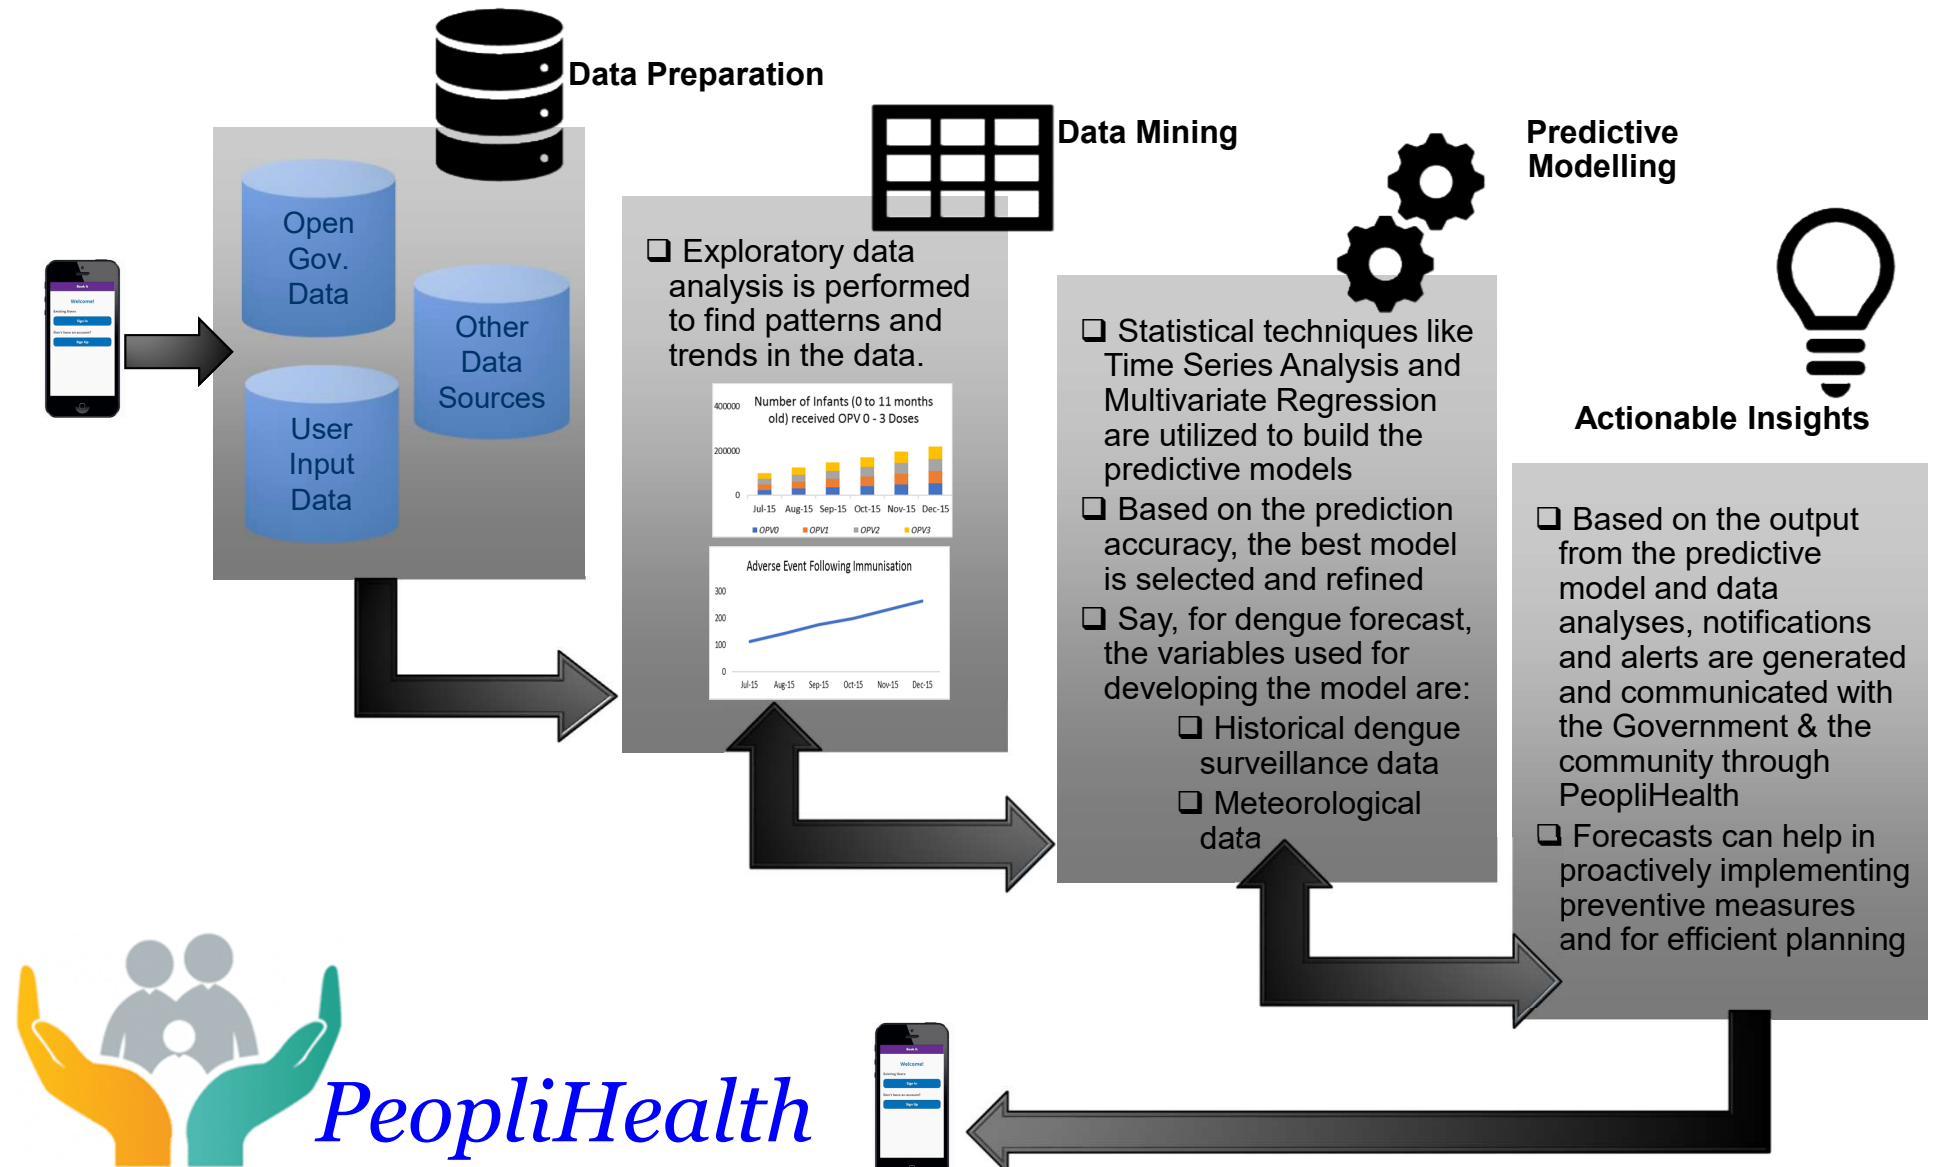

Workflow – Immunization - Infants

Workflow – Communicable disease update

Predictive Analytics implementation

What's covered in this prototype?

- Data preparation has been done on the available data from 'OpenGovDataHack'.
- Aggregation data observed and not ideal to define predictors for building predictive models.
- Current data is analyzed using 'R'
- Hybrid Mobile app developed through ionic3 with static navigation.
- Powerpoint presentation as a prelude before showcasing the functional prototype.

Thank you
